

BORSA İSTANBUL A.Ş. ENVIRONMENTAL POLICY

As a company operating in the services sector, we have developed our Environmental Policy in a compatible way with our environmental sustainability consciousness and our integrated sustainability approach in order to ensure our continual contribution to environmental protection throughout our business activities,

Borsa İstanbul A.Ş. Sustainability Committee is responsible for managing environmental sustainability. We handle our environmental sustainability-related activities under climate change with regard to the energy usage and greenhouse gas emissions related to our operations, other emissions, water and wastewater, and waste management and recycling components.

Energy and Climate Change

As a company operating in the financial sector, our impact on environment and climate change is mostly limited to greenhouse gas emissions due to electricity use and energy consumption in our buildings, and emissions due to transportation of our employees.

We aim to reduce electricity and fuel consumption by using energy in our buildings and in the vehicles that are used for our employees' transportation efficiently. In addition to this, we design and implement other projects that reduce fuel and energy consumption. Thus, we continuously work to reduce our energy consumption per person and minimise our greenhouse gas emissions, which cause climate change.

Other Emissions

Along with greenhouse gas emissions, we track other emissions arising from our buildings and operations regarding transportation, and develop policies that aim to reduce these emissions.

Water and Waste Water

Our water consumption is limited to domestic wastewater, landscape irrigation and water used for cleaning purposes. We aim to use water, one of the most important natural resources, in the most efficient way.

Waste Management and Recycling

We categorise the waste generated from our daily operations as paper, packaging material, cartridge/toner and e-waste. While we reduce our waste via resource efficiency, we categorise it in an appropriate way and ensure that it is collected by licensed recycling centres, in accordance with the relevant legislation.

As an active player in Turkey and regional financial markets, we encourage all of our stakeholders on sustainability by producing sustainable products and services while we reduce our ecological footprint.

We are committed to continuous improvement in our environmental performance by setting objectives and targets, measuring improvements, and reporting results regularly. We are also committed to inform our stakeholders of our performance through our Sustainability Reports and our website. In addition to this, we declare and commit to:

- Monitor and audit our Environmental Policy,
- Ensure that this policy is implemented throughout Borsa İstanbul with employee trainings,
- Support our suppliers by informing them on the adoption of efficient environmental management practices and,
- Receive support and contributions from our employees, suppliers, clients, members of the Board of Directors and all business partners in achieving our environmental targets.
